TITLE : DOOR STRUCTURE OF VEHICLE
HAVING NO CENTER PILLAR

ABSTRACT : PROBLEM TO BE SOLVED: To provide a door structure of a vehicle having no center pillar and having a connection structure composed of a striker and a connection device and capable of preventing the occurrence of a problem of contact of both of them even if erroneous operation situation occurs.

SOLUTION: The connection device 40 is provided with a controller 33 operating and controlling between closing attitude and opening attitude. While the connection device 40 takes the closing attitude, validity for maintaining the closing attitude after changing attitude to the closing attitude is discriminated. If it is discriminated that the maintenance of the closing attitude is not proper, erroneous operation control for making the connection device 40 take the opening attitude is performed.
